Loop ISD
Nutrition and Physical Activity Wellness Policies
Report

After reviewing the implementation assessments of the Nutrition and Physical Activity Wellness Policies, it is determined that no changes are needed to the current policy. The implementation assessment showed the following percentage for each category of the current policy:

II.	Nutritional Quality of Foods and Beverages Sold and Served on Campus	95%
III.	Nutrition and Physical Activity Promotion and Food Marketing	74%
IV.	Physical Activity Opportunities and Physical Education	100%

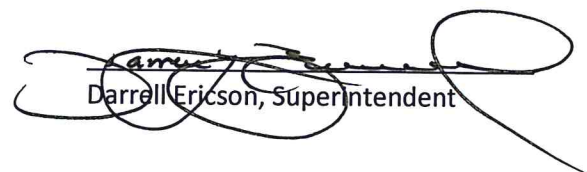

Each section of the report was recorded and tallied. Any section below 60% will need to be addressed and see what changes will need to be made to the current policy. Any score above 60% will indicate no changes to the policy is needed, but certain areas may need to be concentrated on.

The current implementation assessment showed the lowest percentage was in the promotion of nutrition and physical activity and food marketing. This section of the policy has to do with the promotion of nutritional education, the integration of activity in the classroom setting, communication with parents, marketing foods and beverages that meet nutritional standards and promoting staff wellness.

The lowest scores were in the communication of parents and promoting staff wellness. This area will be concentrated on using more communication with parents and staff. In addition to promoting nutritional value through our school menus, we will send home more information encouraging healthy lunches, snacks and beverages. As an administrative staff we will promote and encourage healthy living and lifestyle choices among our staff. We will also look to plan and implement activities supporting efforts to maintain a healthy lifestyle.

It is the goal of Loop ISD to continue to be committed to providing a school environment which promotes and protect our student's and staff's health, well-being, and ability to learn by supporting healthy eating and physical activity.
